

Addestino consists of a multidisciplinary team of 20 engineering professionals who passionately work together on our vision: **Innovation Delivered.**

- Have **lasting innovation impact** by effectively making the difference for our customers and co-create their future through innovative products, services, processes and strategies in a variety of sectors (telecom, healthcare, energy, transport, electronics ...).
- Go **beyond consulting** and be capable to cycle very fast between business, technology, customer experience and delivery process. Be part of a teams of 'special forces', a combination of techno wiz kids, user centric designers, strategists and pragmatic business transformers ...
- Experience a **personalized growth trajectory** through projects in different sectors and roles along with personal coaching, training and working directly with Addestino's partners. Today build an IT architecture, tomorrow assist CEO's with their growth strategy: this is our reality.

Our customers range from big multinationals, SMEs to universities and start-ups. The best proof of Addestino's impact are the top 30 customers in Belgium that already count on our teams for the most challenging assignments for years. A good example is Barco's ClickShare product, which received the Good Design Award in Japan.

To enlarge our team of 'special forces' we are continuously looking for people with exceptional qualities:

## Technology/Innovation Consultants

### Function

As a Technology/Innovation Consultant, you work closely with a wide range of stakeholders at technical, functional, and executive level. You **analyze** the customer's needs, the choice of the best technologies and **design innovative solutions**. You are involved from concept to implementation and will guide the customer during this process. Depending on your knowledge, personal development and interests, you may find a more **technical or business strategic direction**.

### Profile

- Higher academic education (Master – Engineer – PhD – MBA) with a background in Engineering, Applied Science, Computer Science ...
- Strong interest in different industries: telecom, electronics, energy, transport, healthcare, finance ...
- Pragmatic, result-oriented, ability to deliver
- Customer-oriented and good communication skills
- Strong analytic and problem-solving skills
- Fluent in Dutch and English

### Our offer

- A challenging entrepreneurial environment in a young but fast-growing company
- An opportunity to grow in your current domain of competence, and beyond
- Broad variation in challenges and opportunities
- Support and training by senior staff and partners
- A competitive remuneration package
